

# CamCuts v1.0

*by Snake*

CamCuts allows the user to activate different camera functions by pressing only one specific button!

Installation:

- sign the CamCuts.sis, appswitch\_1.0.3\_unsigned.sis and keypress\_1.0.6\_unsigned.sis files
- install the files on C:/ on your mobilephone

After starting up the programm switch it in background (OPTIONS > SWITCH TO BACKGROUND). Start camera application of your phone.

Buttons 1,4,7 and \* change the flash mode of the camera . Buttons 2,5,8 and 0 change the photo mode of the camera. With # you can set self timer to desired time. Press 9 to change color mode of the camera. Press 6 to fade crosshair in or out. Press 3 to switch between Photo and Video recording. In Video Mode you can change color mode by pressing #.

Note: Activate the camera option „fade in symbols“. Always wait till desired function is activated before activating another. If you change camera settings manually, bring the pointer back in standard position (Photo Mode).
