

[SajiOSv4 Help File – A Project By Computer System Engineer Of Islamia University Bahawalpur, Pakistan](#)

**Note : Install Flash Lite 2.0 ,Compatible Python Runtimes and SajiOSv4 to memory card only If you don't have a mmc , then SajiOS will not works.**

### How to install SajiOS ??

SajiOS is developed using Flash Lite and Python technology. Please, uninstall any previous version of Python runtimes if u r going to install new + uninstall SajiOSv3.If you already have working SajiOSv3 then simply install SajiOSv4. Otherwise, simply check mark the optional files Flash Lite 2.0 and Pys60 1.4.5 while installing SajiOS v4. Coz I embedded Flash Lite 2.0 and Python runtimes into the SajiOSv4 sis file. Don't check mark optional files , if u already have working python.After installation, install launch it from the menu icon and have fun ...P

**Please Read FAQ AT END OF HELP FILE**

### How to change icons??

Adding of new icons is very simple from now (version 4). **(No need to edit ssdata.txt any more)**.When you install SajiOSv4 , 2 applications are automatically installed i.e (SajiOS and Icon manager). Launch Icon Manager from the menu or from SajiOS's startmenu.Now , lets suppose we have to add an icon no 7 to the desktop .Then open icon\_manager go to desktop icons > icon 7 .Then u see icon 7 image , icon 7 app & delete icon 7.what these option means ? Actually, icon 7 image means the icon image clicking it open icon names , select any icon image and press ok. Then click on icon 7 app and it automatically displays all installed apps , select any app to which that icon points when u click it in the desktop. delete icon 7 means deleting the icon simply. You can c the following pics for understanding.

## How You Numbered The Icons??

Numbering of icons is same as in previous releases. Let me describe it again :

### Desktop icons

### Submenu apps

### Startmenu Shortcuts

### How To change Themes In SajiOS ?

Very simple. Run SajiOs , go to control panel then desktop and there it is written themes\sstheme , just change it to the one you have install before Like 3 builtin themes are sstheme, vista and luna .So , for vista theme type there “themes\vista” and for luna theme type there “themes\luna” , press ok and return to the desktop. That’s it. Don’t forget to visit [www.sajisoft.50webs.com](http://www.sajisoft.50webs.com) , I will surely update new themes there every week .

### How To Disable/Enable Red, Menu and Green key in SajiOS ?

You can enable/disable red , menu and green keys from SajiOS control panel. This feature only works if your python is working fine. In SajiOS v4 , pressing green key show ur last message. You can disable this feature if u wants privacy from SajiOS control panel.

### How To Make Your Own Icon And Wallpaper?

Flash lite does not support .png or .ico files.It only support .swf files. So, you have to create your own icon in .swf file..You Can easily create your own icons if you have Macromedia Flash , Swish Max or any Flash development tool. In which you can import your transparent .png image and export it as .swf image...Now, what should be the characteristics of icon :

- It Should Be 32x32
- Its size must be less than or equal to 2kb...

And in case of wallpapers, do the same procedure but this time.

- Wallpaper size must be 176x208.
- Wallpaper must be less then equal to 5 kb.

You can decrease the size of wallpaper or icons while exporting them to swf file.

And after making your own icon place it in e:\others\sajios\icons and then edit ssdata.txt and write its name there and if u create your own wallpaper then copy it to e:\others\sajios\wallpapers and by using SajiOS control panel enter its name and press ok.

### How To Make Your Own Themes?

Actually , I m busy in adding features but from now I will try to make new themes & I am writing a skin guide soon . But u must have to be a developer of flash to make themes . After completing my guide , I will publish it and then you can make your own themes . Still I will make themes 4 u. And try to provide you best.

## **FAQ**

**Q. SajiOS is not launching from the menu icon ??**

**A. Because of your python runtimes is not working. The solution to this problem is uninstall SajiOS and Python and install it again to mmc . (SajiOS works only with mmc) . If you are using N70 , then try SajiOS v4 OS8 too. May be it solves the problem.**

**Q. SajiOS launches and said “Flash Lite 2.0 is not installed!!” ?**

**A. Either you install Flash Lite 2.0 to phone memory or you didn't install it yet. Simply, download Flash Lite 2.0 from [www.sajisoft.50webs.com](http://www.sajisoft.50webs.com) download section and install it.**

**Q. SajiOS launches and said “XXXX module not found” ?**

**A. If certain module is not found then SajiOS gives this error. The solution is to uninstall SajiOS and Python and install it again.(As all the modules included in SajiOS sis file).Always use latest version of python i.e Python 1.4.5 (upto now)**

## **Tips**

**NEVER KILL SAJIOS. Always , shutdown SajiOS from start menu otherwise some part of SajiOS keeps running in the memory until you restart the device.**

**If SajiOS is working fine for you or you need further help .Please mail me at [sajisoft@gmail.com](mailto:sajisoft@gmail.com) . I will try my best to solve your problem .**
