

For precise time zone time conversion or for comprehensive information for time difference and daylight savings transitions, tap the compare time button. Select a location and time and date from the pickers. To schedule an event in the Calendar with the selected time and date, tap the leftmost button in the toolbar .

You can switch between normal and compact table mode. The normal mode displays comprehensive information about the location including the date of the next daylight savings time transition and time difference with the selected location. The compact mode allows to view more locations without scrolling the table.

Add calendar event (iOS 4 and later)

To help planning an event or a call, the setting popup provides options to sort the locations by timezone and to select the desired time interval. The rows for the locations with local time within the selected time interval are displayed on light background, the other rows are displayed on dark background.
