

## IMPORTANT!

If you are running iOS 3.x, the alarms will only work while **The World Clock** application is running! To save power, you can press the sleep button on your iPad.

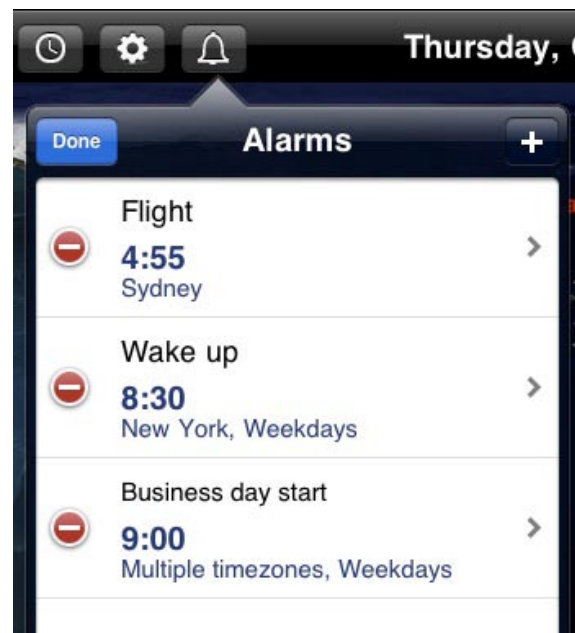

**The World Clock** is iOS 4 ready. With iOS 4, the alarms will work even after you exit the application.

If you delete a clock, all alarms assigned to clock's location are deleted. Alarms for multiple locations are preserved.

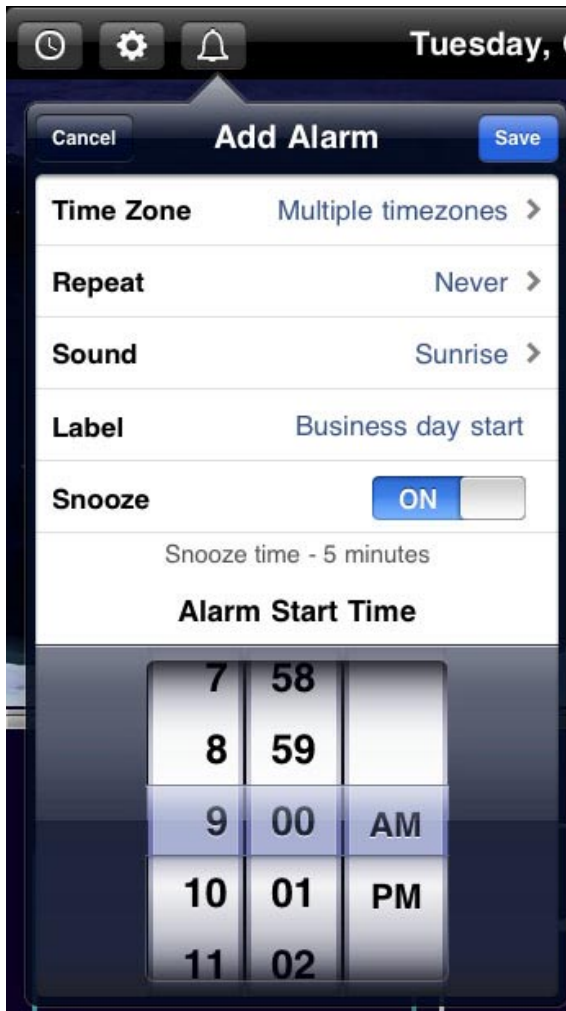

The Alarms option of **The World Clock** can be used both for wake up alarms and for alerts and notifications, e.g. for a start of a business day for different locations. The settings are the same except the sound and time zones you select. You will want a wake up alarm in one time zone at a time, but may want notifications for several time zones. You may want a long and loud sound for wake up but less aggressive sound for notification.

1. Open the Alarms popup. From here, you can turn alarms on or off. To delete or change the alarm settings, tap the **Edit** button.

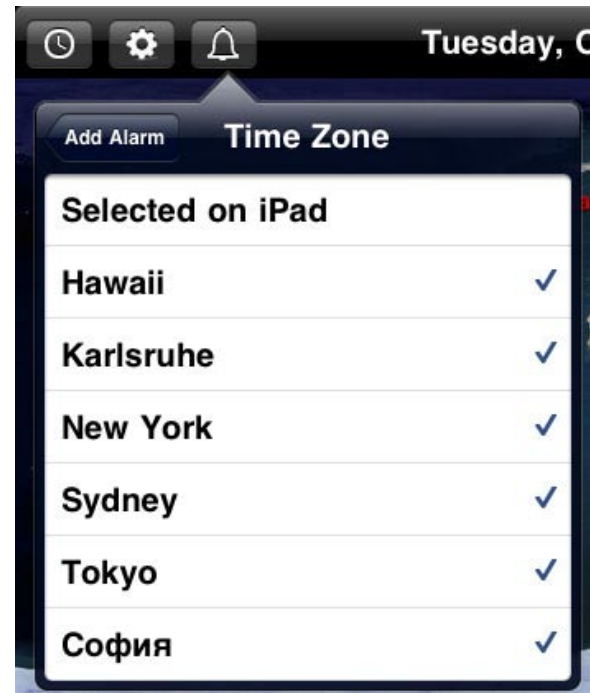

2. Tap the minus sign to delete, tap the row with the alarm you want to change.

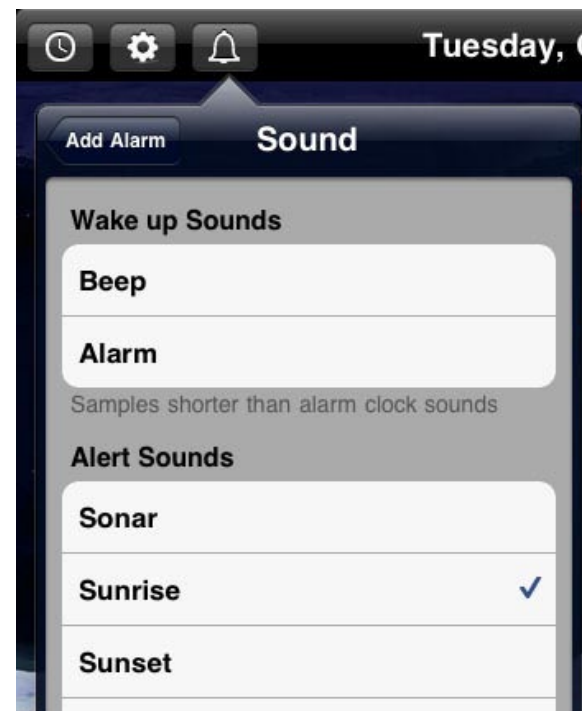

3. Use the picker to select the time.  
To change a setting, tap the respective row.

5. Select days of the week for repeating alarms.

4. Select the time zones for the alarm or notification.

6. Select the desired sound. The sounds for wake up alarms are represented by short samples.
