

By default, clock faces are light during daytime and dark after sunset at each location. This is the most intuitive behavior, but probably not the most useful one. For example, selecting **Business Hours** or **Extended Hours** allows to decide whether it is appropriate to make a business or private call at glance.

1. Open the Settings popup and Select **Clock face color change**.

2. Select the desired rule from the list. For more stylish look, you can turn off the clock face color change by selecting Light or Dark clock face. Tap the Custom item to define your own rule.
