

To find and merge more duplicates and backup contacts, Please In-app purchase our Merge tools.

Feature List:

- 1.Backup contacts.
- 2.Find and merge contacts that share the same name, but contain different information (such as phone numbers and emails).
3. Find and merge all the duplicate information (such as phone and emails) within a contact.
4. Support auto merge and manual merge.
5. Share multiple vCards to groups.

Merging Duplicate Contacts

Here's How

In the 'Merge' view, tap 'Find' -> 'Merge' button.

FAQ

FAQ:

1. What is the meaning of Fast, Advanced and Extensive option in the Settings view?

The Remove app has three methods (Fast, Advanced and Extensive) to find duplicate contacts.

Fast option: Find and merge contacts that share the same name, but contain different information (such as phone numbers and emails). This method is very fast, but can not find all the duplicates.

Advanced option: Please try Fast option first. This method can find more duplicates, but it takes longer than Fast method.

Extensive option: Find and merge all the duplicate information (such as phone and emails) within a contact.

2. Can not find all the duplicates

(1) In the Settings view, turn on 'Delete linked cards' option.

(2) In the Settings view, check 'Merge and save conflicts in Note' option.

(3) In the Settings view, there are "Fast", "Advanced" and "Extensive" options as well, please check all of them when you try to "Find" duplicates.

(4). If you have a large number of duplicates, Remove duplicates first and then find again.

3. How to preview duplicate contacts before Merging them?

To preview a contact, click anywhere in the row containing the name. If the Preview looks good to you, tap the **Merge** button.

3.If I don't want to merge some of the duplicates, how to uncheck them from the list and keep them in the addressbook?

Use 'Swipe to Delete' to protect your contacts. 'Swipe to Delete' will remove them from Merging list. App removes only duplicate contacts in the Merging list.
