

Basic Version is designed to find and remove 100% identical duplicate contacts.

#### Basic Version Feature List:

1. Find and remove exact (100% identical) duplicate contacts.
2. Find and remove contacts without names
3. Find and remove contacts without phone numbers.
4. Find and Remove contacts without email addresses
5. Find and Remove contacts without email and phone.
6. Find and Remove contacts without name, email and phone.

To find and merge more duplicates and backup contacts, Please In-app purchase our Merge tools.

Feature List:

1. Backup contacts.
2. Find and merge contacts that share the same name, but contain different information (such as phone numbers and emails).
3. Find and merge all the duplicate information (such as phone and emails) within a contact.
4. Support auto merge and manual merge.
5. Share multiple vCards to groups.

# **Cleaning Up Exact Duplicate Contacts**

Here's How

In the 'Duplicates' view, tap 'Find' -> 'Exact Duplicates' -> 'Remove' button.

## **FAQ:**

### **1. Can not find all the exact duplicates**

(1). In the Settings view, turn on 'Delete linked cards' option.

(2). If you have a large number of duplicates, Remove duplicates first and then find again.

### **2. How to preview duplicate contacts before removing them?**

To preview a contact, click anywhere in the row containing the name. If the Preview looks good to you, tap the **Remove** button.

### **3. If I don't want to remove some of the duplicates, how to uncheck them from the list and keep them in the addressbook?**

Use 'Swipe to Delete' to protect your contacts. 'Swipe to Delete' will remove them from removing list. App removes only duplicate contacts in the removing list.
